

Dementia Friendly Bathroom Solutions

Thoughtfully designed sanitaryware and fixtures to support independence and ease of use.

Easy Identification

Our range of full coloured red and blue handles offer intuitive operation for those with cognitive or visual challenges.

The bold, contrasting colours clearly signal hot and cold water, helping users identify tap functions quickly and use them with greater confidence and independence.

Empowering Independence

Our dementia-friendly range is thoughtfully designed to support independence and ease of use. With a carefully coordinated colour scheme, you can enhance spatial awareness, making it easier for people to navigate their surroundings and identify key features.

Strategic use of colour also helps create a calming and welcoming environment, promoting comfort and wellbeing. When spaces feel intuitive and accessible, individuals with dementia can move through their daily routines with greater confidence, leading to a better quality of life.

Increased Safety

Using strong colour contrast improves visibility and safety. It helps people with dementia distinguish between objects and surfaces, such as toilets and floors, reducing confusion and the risk of falls.

Clear visual contrast also supports daily tasks by making it easier to identify important features without assistance. It aids wayfinding by using colour to differentiate between rooms and reduces anxiety by creating a more understandable environment.

Red Leads the Way

Red is the most easily perceived colour and remains recognisable the longest - making it ideal for dementia-friendly design. It can be used strategically to draw attention to key areas, guiding users without the need for verbal instructions.

This reliable visual cue supports intuitive navigation, builds confidence, and contributes to a more accessible, user-friendly space.
