# Single Lever Mixers

Trusted for decades to deliver water solutions for a healthier environment, our tapware is used in hospitals, medical, aged care, education and research facilities throughout Australia.

Following extensive research and consultation with architects and hydraulic engineers, our specialised single lever mixers respond to the unique challenges faced in hospitals, medical preparation areas, aged care facilities, education and research environments.

Our single lever mixer collection accommodates an extensive range of needs in high-risk, high-care industries. Whether it's infection control in sterile settings, practical options for visually impaired residents, lead safe tapware or hotel-style design in luxurious care facilities, our solutions have got you covered.

#### Offering even greater protection

All our products are safe and compliant with the stringent Australian Standards. But we recognise customer needs often surpass industry requirements. That's why we've added even more protection for a safer community and a healthier environment.

#### Accessible and efficient

Supplied with hot/cold or warm/cold colour options, as well as an extended lever for accessible compliance our single lever mixer collection is practical as well as convenient. Water efficiency is at the forefront of all our products. Providing 4, 5 and 6 star WELS ratings, we can help reduce unnecessary water usage and increase savings through a combination of commercial grade quality and clever design.

### GalvinAssist®

Inspired by a passion to be stylish and make everyday tasks easier, the sophisticated GalvinAssist® range perfectly balances form and function. Our single lever mixers are aesthetically beautiful and ergonomically matched for users seeking to retain their independence through varying stages of care.

#### Style and protection

European designed and manufactured GalvinAssist® goes beyond the basic design of being easy to reach and operate for optimal comfort. Our features also include scald protection as well as oversized directional/temperature indicators.

### CliniLever® Hospital

Our CliniLever® Hospital range is a durable and affordable design for all high-use medical applications. The compact design of our single lever mixer taps is perfectly suited to high use bathroom applications with dual under basin fixing.

#### Legionella and HAI protection

Boasting features to help combat the fight against the spread of bacteria such as Legionella, and the risk of hospital acquired infections (HAIs), our easy to use, clean and maintain range is a highly cost-effective solution for any medical application.

#### Ease of use

Enhancing independence and safety is critical for those living with visual impairment. Our single lever mixer tap options with coloured XL temperature and directional indicators increase confidence and ease of use.

### CliniLever® Stainless Lead Safe™

Since 2018 our pioneering Lead Safe™ tapware has been extensively used in a variety of environments. Our cost-effective CliniLever® Stainless Lead Safe™ single-lever mixers are ideal for use in non-medical areas of high use.

#### Safe and reliable

Redesigned and re-engineered to provide safer water delivery, we use specialist materials such as stainless steel or plastic materials that are free of lead, and DZR brass that is low in lead. This change in materials and the development of new manufacturing techniques provides enhanced water outcomes with continued reliability.
