Solid Surface Sanitaryware

Designed for high-traffic and high-care environments, from versatile pans and hand wash basins to matching accessories, every product combines modern design, long-lasting performance, and enhanced safety to meet the needs of mental health, healthcare, correctional, education, and public spaces.

Vandal Resistant

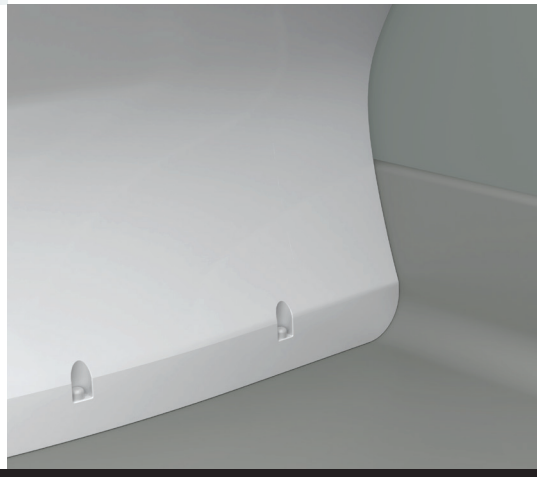

Our solid surface products feature robust, one-piece construction to deter damage and reduce maintenance, with some models also offering ligature-resistant features for enhanced safety. Their strength and durability make this range ideal for mental health, healthcare, correctional, education, and public spaces.

Stain Resistant

Rated 5 under ISO EN 19712-3-2007, solid surface delivers excellent resistance to stains, surface wear and cigarette burns, ensuring long-term reliability.

Added Coving

Our solid surface pans feature integrated coving, ensuring seamless installation with vinyl flooring, easier cleaning, and the highest hygiene standards.

Full range of spare parts available.

Wide Range of Options

Our solid surface pans are available in a range of sizes, with optional coloured seats designed to enhance accessibility and provide clear user guidance.

Hand wash basins are offered in multiple designs, sizes, and activation styles, allowing for flexible and efficient layout planning.

The collection is complemented by matching solid surface accessories, including shrouds, toilet roll holders, mirrors, and shelves, for a cohesive and functional finish.

Seat Colour Options

Hygiene and Infection Control

Solid surface is non-porous and seamless, eliminating joins and crevices where water, dirt and bacteria can accumulate. Its smooth finish supports faster, more effective cleaning and helps maintain infection control standards. Designed for demanding environments, it reduces contamination risks and delivers long-term confidence in high-use sanitary spaces.

Durable and Renewable

Built to withstand heavy, high-traffic use while maintaining its appearance and performance. As a homogenous material, scratches or scuffs can be refinished to restore the original surface, extending product life and significantly lowering whole-of-life costs through reduced maintenance and replacement.
